Status:

Closed

Last modified:

March 2023

The Core multimodal rail/road logistics terminal in Vado Ligure is located on the Mediterranean and Rhine–Alpine corridors. The aim of the Action is to improve the last-mile connections and interconnection with Short Sea Shipment services of the port of Vado Ligure.

The Action will be implemented in 5 activities, both studies and works. The terminal will be optimised by installing 3 railway tracks with a length of 450 m, an automatized Railway Gate and a bridge allowing road and rail access to the terminal. The study aims at elaborating a preliminary technical documentation for the last mile connection solutions.

The Action, as a part of a Global project, will contribute to the economic development of the region. It will foster the use of transport modes which have lesser environmental footprint.
